Summary of the Event

The Department of Computer Applications (BCA) conducted a MERN Stack Add-On Program from 16th Feb to 28th Feb 2026 with the objective of giving students practical exposure to full-stack web development. The sessions were handled in a step-by-step manner, starting from basic concepts and gradually moving towards building a complete working application. In the initial days, students were introduced to full-stack development concepts, client-server architecture, SDLC models, and real-time industry practices. Git and GitHub were explained in detail, and students were given hands-on practice to understand version control and project workflow.

Later, the focus shifted to backend development. Students learned how the backend works conceptually and created a backend application from scratch. MongoDB and Mongoose were introduced, and students practiced database connection, model creation, and implementing CRUD operations. APIs were built and tested using Postman, and proper folder structure was maintained throughout the development process. In the next phase, React basics were covered. Students worked on connecting the frontend with the backend APIs, fetching data, handling CORS issues, and running both frontend and backend together. State management and additional features were also discussed. Small tasks and live practice sessions helped students understand the complete development flow clearly.

By the end of the program, students were able to understand how a full-stack application is structured and executed. The add-on program was interactive and practical in nature, and it helped students gain confidence in working with modern web development technologies.

MERN STACK Web Development

The session was well-structured and focused on introducing students to fundamentals of MERN which are essential technologies for developing modern web application. The trainer explained concepts in a clear and understandable manner, making it easier for beginners to follow. Overall, training boosted our confidence in developing MERN stack projects & provided a strong foundation for building innovative & industry-ready final year applications.
