Method-Flipped class: Principles and Practices of Business Decision

Flipped learning is an increasingly popular pedagogy in secondary and higher education. Students in the flipped classroom view digitized or online lectures as pre-class homework, then spend in-class time engaged in active learning experiences such as discussions, peer teaching, presentations, projects, problem solving, computations, and group activities. In other words, this strategy “flips” the typical presentation of content, where class time is used for lectures and example problems, and homework consists of problem sets or group project work

Keeping the view in mind on 12th February 2024, the activity was conducted.
